SUMMARY

Passionate C++ Developer with a Future-Focused Mindset

A C++ developer with 10 years of experience and a track record of reviving legacy systems. I pair old-school craftsmanship with modern, data-driven practices-instrumenting services with New Relic APM and low-level profilers to expose bottlenecks and deliver measurable performance improvements (lower p99 latency, reduced memory footprint, higher throughput). I treat every project like a business, making ROI-focused decisions. Beyond shipping code, I actively mentor others to grow.

WORK EXPERIENCE

JUL 2024 - CURRENT

UE Game Developer at Indie Spain/Romania

C++ Unreal Engine 5.4 Gameplay Architecture GAS 3D Modelling
OpenAI API Perforce GitLab CI/CD Azure Windows

Led development of a simulation/strategy game using Unreal Engine 5.4 and the Lyra game template, focusing on gameplay systems, physical animation, and AI behaviour.

Architected core systems including inventory, trading, and melee combat, leveraging Gameplay Ability System (GAS) for modular gameplay features.

Collaborated closely with a multidisciplinary indie team of 4 people (art, design, sound) while also implementing and integrating OpenAI APIs for in-game assistant features.

Managed source control using Perforce and automated build processes via GitLab CI/CD and Azure pipelines.

AUG 2021-JUN 2024
(2 years 11 months)

Team Lead at Luxoft, Ukraine

C++ C# AWS New Relic Linux Windows Docker GitLab Azure
JFrog Delphi

Managed an 8-person team delivering a phased migration from a legacy monolith to AWS.

Established CI/CD and IaC, plus New Relic backed SLOs, improving deploy from weekly to daily(about 5x), and p99 latency from 1.2s to 480ms (-60%) and p95 from 600ms to 240ms (for separate services, measured in New Relic APM).

Served as the technical escalation point and mentor, unblocking engineers, running design reviews, and keeping the roadmap on track with stakeholders. Was responsible for feature/release builds (integration activity), fixing security issues and performing license check reports.

Nov 2020–Aug 2021
(10 months)

Senior Software Engineer at Luxoft, Ukraine

C++ C# AWS New Relic Linux Windows Docker GitLab Azure

I've built an MVP under a tight deadline that won approval and secured project funding; implemented high-performance AWS microservices, integrated them into a desktop application, and instrumented with New Relic to surface bottlenecks and validate improvements, earning stakeholder sign-off.

(abbreviated work history below, see the LinkedIn profile for full details)

OCT 2017 - APR 2020
(2 years 7 months)

Software Developer at Luxoft (Volkswagen project), Ukraine

C++ Boost Linux Multithreading Unit Testing Bash CMake SQLite

Software Developer on an in-vehicle Head Unit (mid-to-final phases); was part of the Connectivity domain: smartphone pairing, Bluetooth calling, contact sync, phone mirroring, and media playback.

Delivered performance gains via async I/O, connection-state caching, and lock-contention fixes, cut device-pairing time by 50% and reduced contact-sync p99 latency from 30s to 5s.

Designed and implemented a multithreaded task-cancellation mechanism (priority-aware cancellation tokens and cooperative checkpoints) to preempt long-running syncs when the user changes context; eliminated UI hangs and reduced interaction latency by 90%.

MAY 2016 - OCT 2017
(1 year 6 months)

C++/Qt Developer at Chameleon soft LTD, Ukraine

C++ Java Linux Multithreading Qt QML Android Development

As a C++/Qt Developer, I developed POS Terminal software for regular points of sale (POS) and self-service checkout.

I also developed an Android POS Terminal application for mobile checkouts.

Nov 2012 - MAR 2016
(3 years 5 months)

Junior Research Scientist at V.Danilevsky Institute for Endocrine Pathology Problems AMS of Ukraine, Ukraine

Statistics C++

As a Junior Research Scientist I worked on endocrinology articles, involved in development of some tools for statistics research.

PROGRAMMING PROFICIENCY

LANGUAGES: C++ (expert), C#, Java (proficient)
PATTERNS: DDD, OOP, TDD
TECHNOLOGIES: C++11, Qt and Boost libraries, Docker, AWS, New Relic, Kafka, Git, SVN, GTest, GitLab/Jenkins pipelines, JFrog, OpenAI API, Perforce, UE5+, Postgres

SKILLS

LANGUAGES: English, Ukrainian, Russian, Spanish (beginner)
